

**Minnesota Statewide Conservation and Preservation Plan**

INSTITUTE ON THE ENVIRONMENT

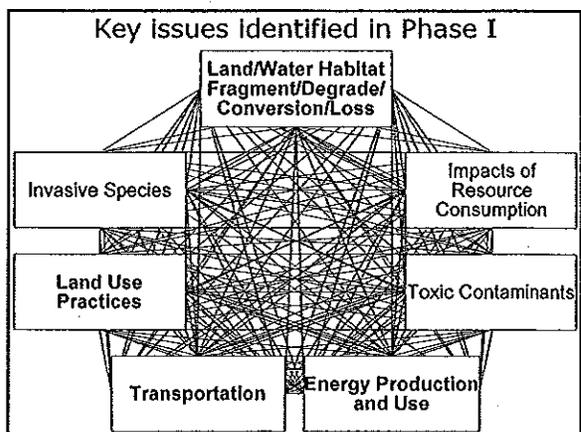

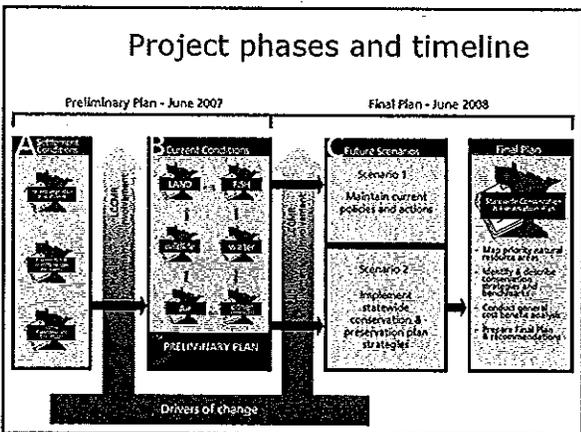

UNIVERSITY OF MINNESOTA

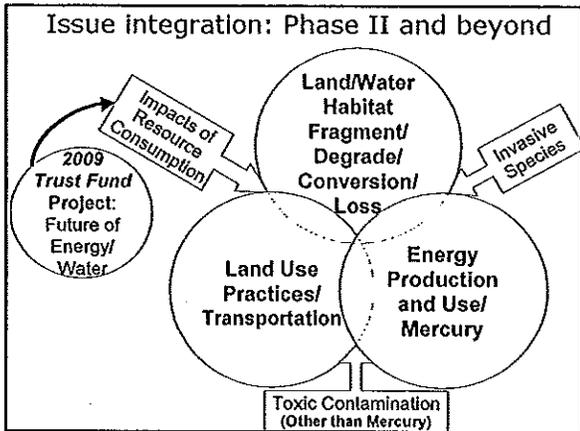

CR Planning Bonestroo

- ### Presenters
- Deb Swackhamer, Univ. of Minnesota
  - Jerry Niemi, Univ. of Minnesota NRRI
  - Anne Kapuscinski, Univ. of Minnesota
  - John Shardlow, Bonestroo
  - Les Everett, Univ. of Minnesota
  - Dave Mulla, Univ. of Minnesota

- ### Presentation Goals
- Describe the goals of the project
  - Describe the process used to develop the recommendations
  - Overview of the recommendations

- ### Goals of the Project
- Comprehensive inventory and assessment of Minnesota's environment and natural resources
  - Review, analyze, integrate, & build upon existing information and plans pertaining to Minnesota's environment and natural resources
  - Identify & prioritize important issues and trends affecting MN's environment and natural resources
  - Develop and prioritize recommendations for strategies to best address issues and trends

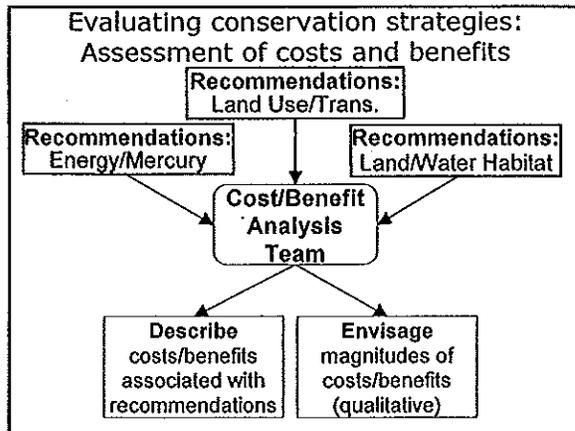

Interconnections

	Habitat	Land use	Energy	Consumption	Toxics	Transportation	Invasives
Air		✓	✓	✓	✓	✓	
Water	✓	✓	✓	✓	✓	✓	✓
Land	✓	✓	✓	✓	✓	✓	✓
Fish	✓	✓	✓	✓	✓	✓	✓
Wildlife	✓	✓	✓	✓	✓	✓	✓
Recreation	✓	✓	✓	✓	✓	✓	✓

- Phase II Products
- Priority area mapping
  - Recommended conservation strategies
  - Trend analysis supporting recommendations
  - Evaluating conservation strategies

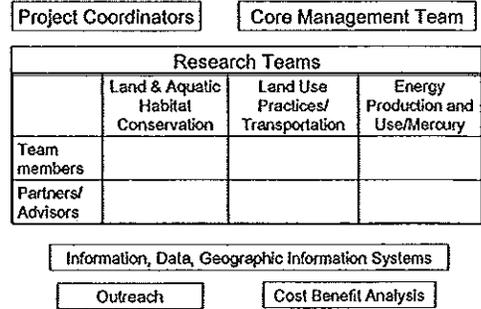

- Assessment of Costs and Benefits
- Objectives
    - Better understand potential costs and benefits of selected recommendations
    - Estimate the order of magnitude of potential costs and benefits from the literature for selected recommendations
  - Method
    - *Brainstorming sessions*: Identification of key costs and benefit items
    - *Survey*: Better understand various aspects of costs and benefits
    - *Literature survey*: Identify relevant cost/benefit estimates from the literature

- Example: Wetland restoration
- Key benefits (total: \$7.6M – \$230.5M):
    - Mitigation of flooding: \$4.1M – \$148M per year
    - Improvement in water quality: \$2.5M – \$27.3M per year
    - Provision of critical habitat: \$1M - \$55.2M per year
  - Key costs (total: \$20.3M – \$67.9M):
    - Restoration and management: \$2.8M - \$42M
    - Opportunity cost (avoided farm production): \$5M - \$12.7M
    - Land acquisition: \$11.8M
    - Easements: \$0.72M - \$1.4M
  - Estimated cost effectiveness (benefit/cost): 0.38 – 3.38

### Stakeholder evaluation of recommendations

- Multiple avenues inviting people to comment
  - Advisors to the project teams
  - Website
  - Presentations
  - Outreach Forums
  - Final Forum on July 14<sup>th</sup> in Mankato
- Reached over 2,000 people at presentations
- Comments compiled in Appendix VII
- Comments reviewed by teams in writing final recommendations

### Phase II Project Organization

### Phase I & II team members and project advisors

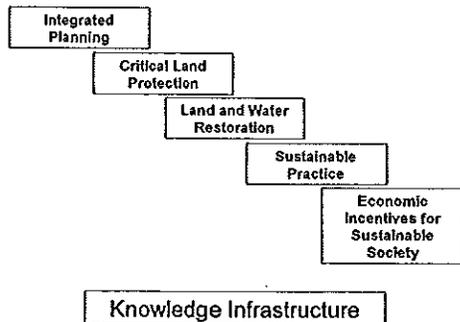

Over 100 scientists, professionals, agency staff, and citizen groups involved from the beginning of the project

	Land & Aquatic Habitat Conservation	Land Use Practices/Transportation	Energy Production and Use/Mercury	Cost Benefit Analysis	GIS and Data Support
University of MN	25	15	15	5	15
Bonestroof/CR Planning	5	3			4
Citizen groups	7	11	4		
Agency staff	7	5	3		

### Complementary efforts

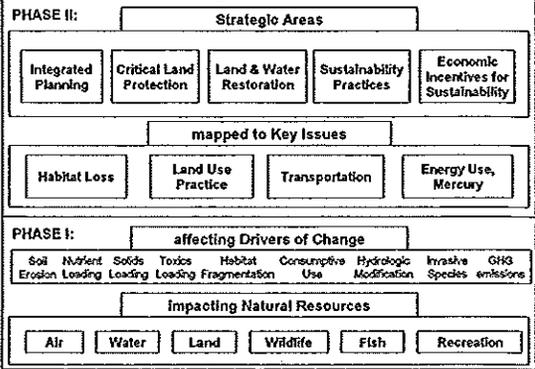

- There are many complementary efforts such as:
  - Clean Water Council
  - Great Outdoors Minnesota/ Campaign for Conservation
  - MN Climate Change Advisory Group
  - Lake Pepin TMDL process
  - Regional Council of Mayors sustainability initiative
- Multiple State agency efforts
- We have reviewed and learned from their efforts

### Framework for Integrated Resource Conservation and Preservation

### Strategic Framework

Page 6 Final Plan

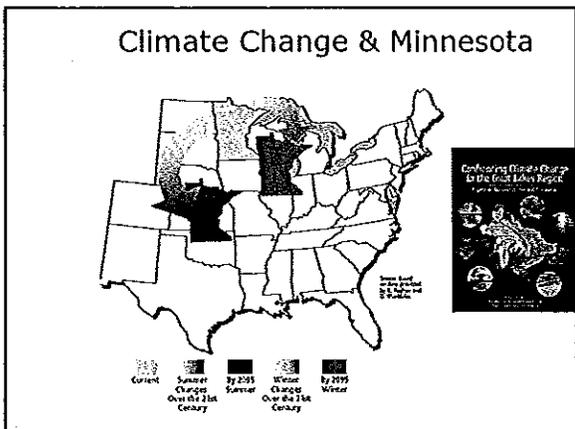

**Natural Resource Values Assessment of Recommendations**

Page 7 Final Plan

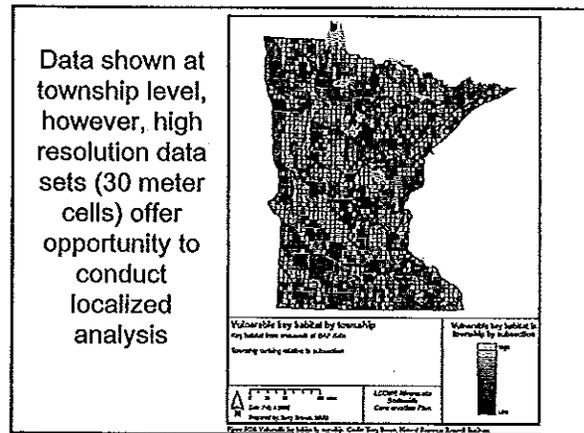

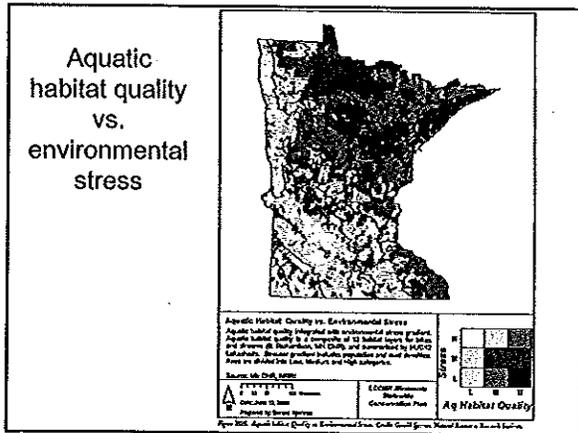

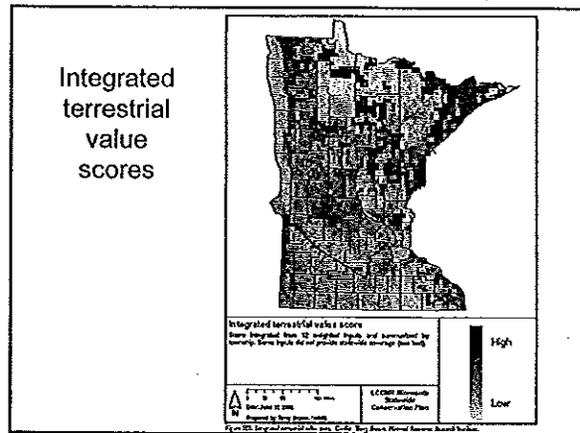

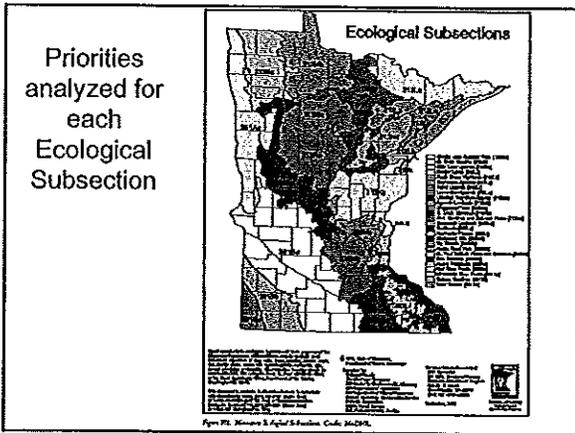

- Team Recommendations**
- Land and Aquatic Habitat Team
  - Land Use Team
    - Community
    - Agricultural
    - Forestry
  - Transportation
  - Energy Production and Use/ Mercury

- Land and Aquatic Habitat Conservation: Products**
- Identify/map critical land & aquatic areas necessary to maintain/improve:
    - Water quality
    - Biodiversity
    - Sustainable outdoor recreation
    - Quality of Minnesota habitats
  - Identify strategies & policies needed to maintain or restore critical land & water areas

- Mapping habitat quality: Methods and results**
- Goal was to prioritize important areas for conservation
  - Use existing information
  - Integrate positive (resources) and negative (threats to resources) information

- What makes this study unique**
- Collaboration with major natural resource management agencies provided access to most comprehensive and up-to-date data sets and expert knowledge
  - Highly integrated data sets
  - View across the spectrum of terrestrial and aquatic resources

- ### Land Protection
- **Habitat 1:** Protect priority land habitats
  - **Habitat 2:** Protect critical shorelands of streams and lakes
    - 2A. Acquire high-priority shorelands
    - 2B. Protect private shoreland via economic incentives and other tools
  - **Habitat 3:** Improve connectivity and access to outdoor recreation

- ### Land & Water Restoration
- **Habitat 4:** Restore and protect shallow lakes
  - **Habitat 5:** Restore land, wetlands, and wetland-associated watersheds
  - **Habitat 6:** Protect and restore critical in-water habitat of lakes and streams
    - 6A. Restore habitat structure within lakes
    - 6B. Protect and restore in-stream habitat
    - 6C. Protect deep-water lakes with exceptional water quality

### Sustainable Practice

- *Habitat 7:* Keep water on the landscape
- *Habitat 8:* Review and analyze drainage policy

### Knowledge Infrastructure

- *Habitat 9:* Overall research on land and aquatic habitats
- *Habitat 10:* Research on near-shore habitat vulnerability
- *Habitat 11:* Improve understanding of ground water resources
- *Habitat 12:* Improve understanding of watersheds to multiple drivers of change
- *Habitat 13:* Habitat and landscape conservation education and training for all citizens

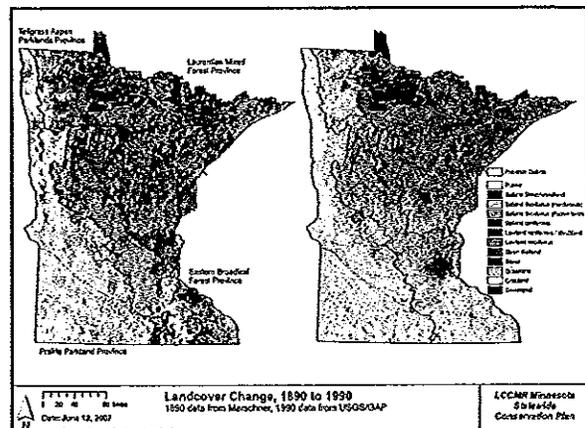

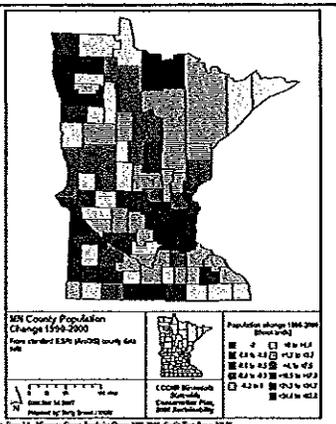

### Land Use Practices: Products

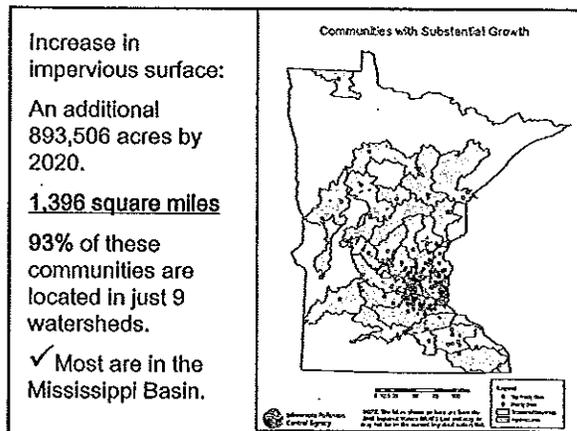

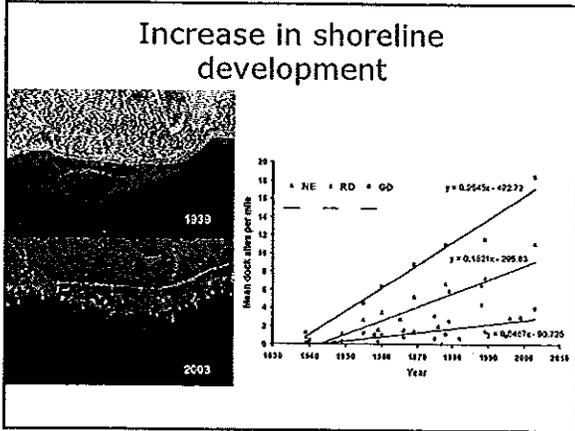

- Identify public/private land use choices needed to:
  - Improve environmental quality
  - Anticipate and adapt to environmental changes in Minnesota
- Identify land use practices & policies to best support these choices

### Land Use Practices Team

- Focus is on how land is used on a particular parcel or site
- Three major types of land uses in Minnesota
  - Urban/Community
  - Agriculture
  - Forest

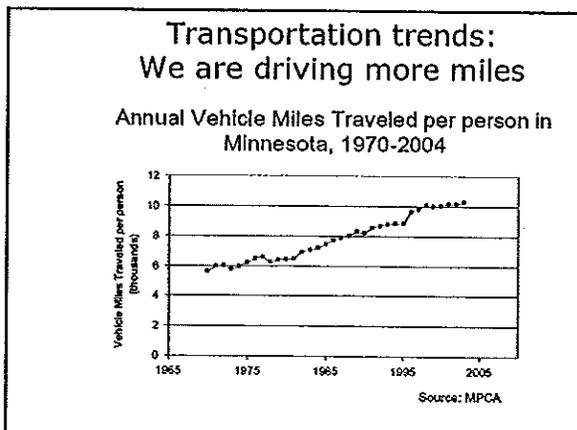

### Land Use Trends: Population growth

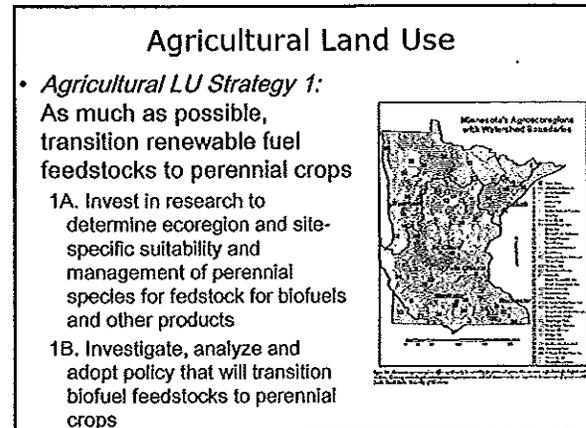

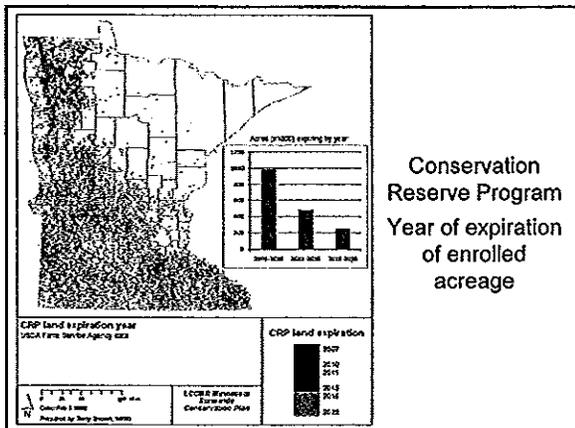

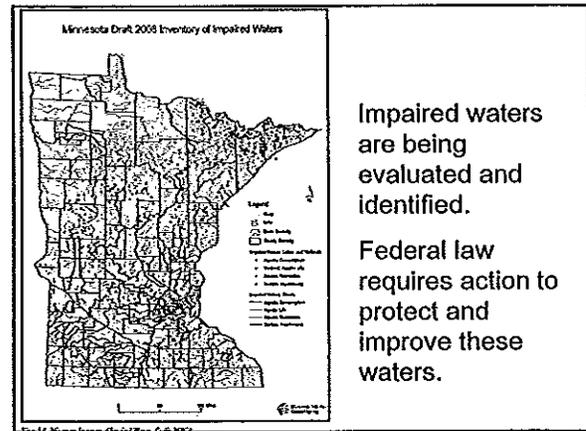

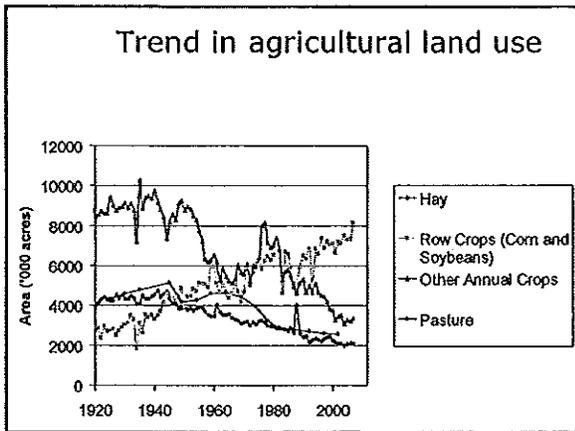

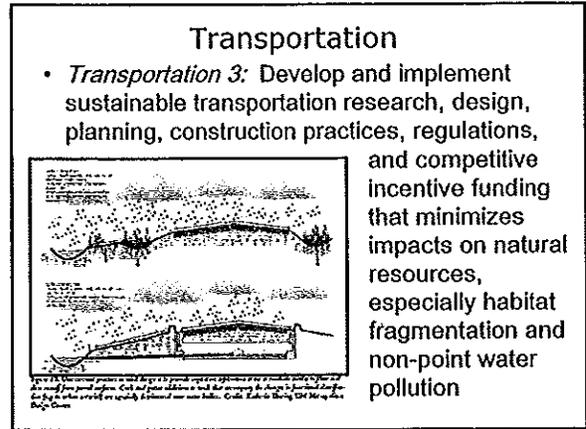

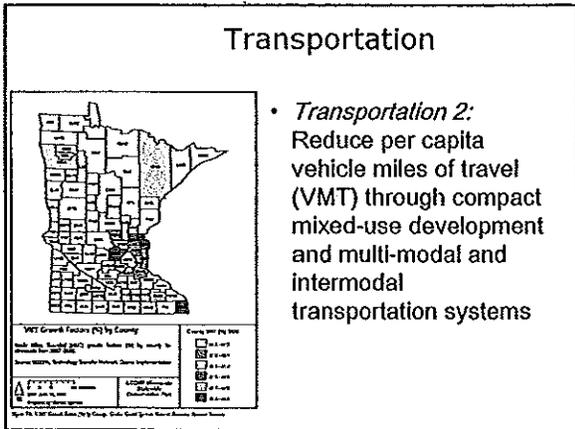

- ### Community Land Use
- *Community LU 1:* Fund and implement a state land use, development, and investment guide
  - *Community LU 2:* Support local and regional conservation-based planning
    - Demonstration projects
    - Incentives
    - Tools and technical assistance
    - Investment in base data

- ### Community Land Use
- *Community LU 3:* Ensure protection of water resources in urban areas by evaluating and improving current programs
    - Credit system for stormwater and low-impact development (LID) best management practices (BMPs)
    - Simple modeling for TMDL compliance
    - TMDL BMP implementation monitoring
    - Water quality media campaign

- ### Transportation
- *Transportation 1:* Align transportation planning across state agencies and integrate transportation project development and review across state, regional, metropolitan and county/local transportation, land use and conservation programs
    - Institute interagency alignment of planning to coordinate transportation with other state planning cycles
    - Integrate streamlined statewide environmental transportation project review with other statewide and cross-jurisdictional planning

### Agricultural Land Use

- **Agricultural LU Strategy 2:** Reduce streambank erosion through reductions in peak flows
  - 2A. Invest in research to determine the quantitative relationship among trends in precipitation, artificial drainage systems, and stream hydrology
  - 2B. Set research-based goals for peak flow reductions
  - 2C. Invest in strategically targeted programs for reduction of peak flows
  - 2D. Investigate, analyze, and adopt science-based policy that strengthens mitigation of peak flows from artificial drainage systems

### Agricultural Land Use

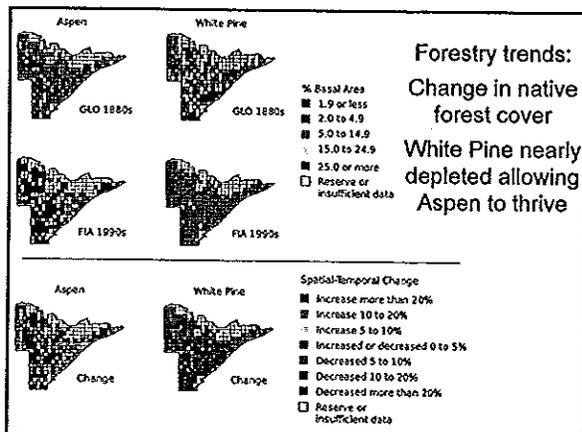

- **Agricultural LU Strategy 3:** Reduce upland and gully erosion through soil conservation practices
  - 3A. Invest in education and incentive programs that target landowners in critical sediment source areas
  - 3B. Investigate the feasibility of developing or amending policy to phase in outcome-driven, practice-flexible soil and water conservation plans for all farms with potential to deliver sediment and nutrients to water bodies

### Agricultural Land Use

- **Agricultural LU Strategy 4:** Enable improved design and targeting of conservation through improved and timely data collection and distribution
  - 4A. Invest in basic information to support soil and water protection
    - LIDAR
    - Statewide land cover
    - Maps of artificial drainage network
    - Annual crop residue survey

### Agricultural Land Use

- **Agricultural LU Strategy 5:** Increase protection of important agricultural lands in local land use planning. Integrated into state land use, natural resource, and investment guide and conservation-based planning recommendations

### Forestry Land Use

- **Forestry 1:** Protect large blocks of forested land
- **Forestry 2:** Assess tools for forest land protection
- **Forestry 3:** Support and expand sustainable practices on working forested lands

### Energy Production and Use: Products

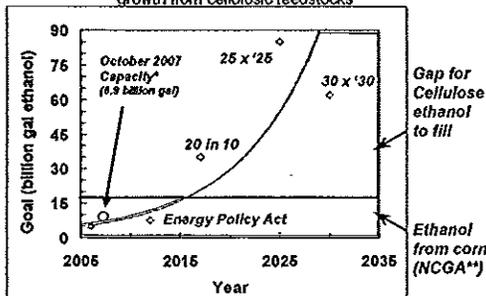

- Identify energy trends/impacts, including the areas of:
  - Biofuels
  - Conservation of fossil fuels
- Identify/map priority natural resource areas likely to be affected
- Identify energy-related investment & policy choices that impact natural resources

### Three Overarching Goals - Multiple Recommendations in Each

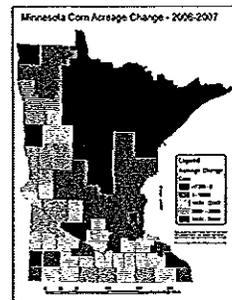

- A. Promote alternative energy production strategies that balance or optimize production of food, feed, fiber, and fuel with protection or improvement of environmental quality
- B. Promote a healthy economy, including strategies that promote local ownership of alternative energy production and processing infrastructure, where appropriate
- C. Promote energy conservation efforts among individuals, businesses, communities and institutions

### Goal A: Promote Alternative Energy Production Strategies

Ethanol production will continue to grow, with most expected growth from cellulosic feedstocks

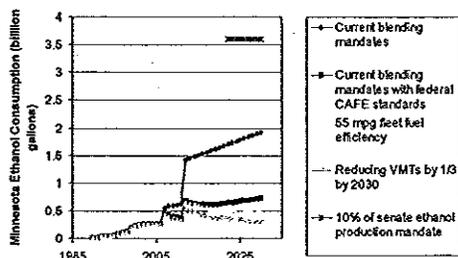

### Impacts of Biofuel Industry on Cropping System Change

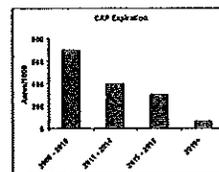

### Goal A: Promote Alternative Energy Production Strategies

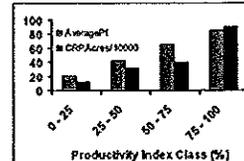

Ethanol demand in Minnesota will also continue to grow.

### Half of Minnesota's Expiring CRP Land Could be Lost

Potential Impacts:  
Loss of Wildlife Habitat  
Enhanced Erosion  
Increased Pesticide Leaching

### Goal A: Promote Alternative Energy Production Strategies

- *Energy 1:* Develop coordinated laws, policies, and procedures for governmental entities to assess renewable energy production impacts on the environment
- *Energy 2:* Invest in farm and forest preservation efforts to prevent fragmentation due to development, guided by productivity and environmental vulnerability research
- *Energy 3:* Invest in perennial biofuel and energy crop research and demonstration projects on a landscape scale

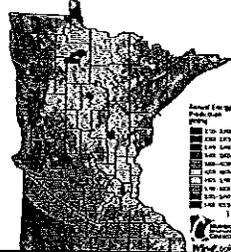

### Goal A: Promote Alternative Energy Production Strategies

- *Energy 4:* Develop policies and incentives to encourage perennial crop production for biofuels in critical environmental areas
- *Energy 5:* Invest in data collection to support the assessment process
- *Energy 6:* Invest in research to determine sustainable removal rates of corn stover and to establish incentives and BMPs

### Goal B: Promote a Healthy Economy

Community-owned wind power is posited to have a greater beneficial impact on the economy compared with corporate-owned wind power

Minnesota's Wind Resource by Estimated Annual Energy Production at 80 Meters

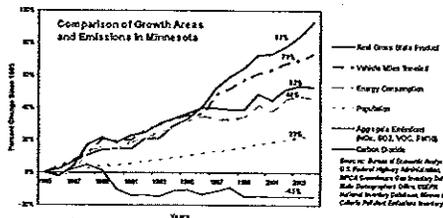

### Goal B: Promote a Healthy Economy

- *Energy 13:* Invest in research and policies on implementation strategies and optimal pricing schemes for 'green payments.' These 'green payments' may be applied to perennial energy crop production.
- *Energy 14:* Investigate opportunities to provide tax incentives for individual investors in renewable energy (e.g. for individuals who wish to install solar panels).
- *Energy 15:* Invest in efforts to develop, and research to support, community-based energy platforms for producing electricity, transportation fuels, fertilizer, etc. that are locally/ cooperatively owned.

### Goal C: Promote Energy Conservation Efforts

Energy consumption and CO<sub>2</sub> emissions are growing faster than population in Minnesota

### Goal C: Promote Energy Conservation Efforts

- *Energy 16:* Provide incentives to transition a portion of Minnesota's vehicle fleet to electrical power, while simultaneously increasing renewable electricity production for transportation
- *Energy 17:* Promote policies and incentives that encourage carbon-neutral businesses, homes, communities
- *Energy 19:* Promote policies and strategies to implement smart meter and smart grid technology

## Energy Team Conclusions

- The recommendations made are a start for the state -- other actions likely will be important as we move into the future
- Many alternative energy scenarios exist – Biofuel energy production alone is not sufficient
- Policy changes are needed to ensure that perennial biofuels can be grown for renewable energy and environmental benefits, while maintaining production of other annual crops for food, feed and fiber

## Natural Resource Values Assessment of Recommendations

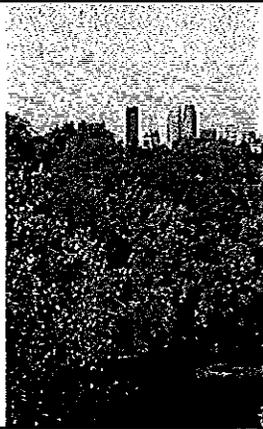

LEGEND: ● = Good/Very Good ○ = Fair/Good ○ = Fair/Poor ○ = Poor

Recommendation	Water	Soil	Wetlands	Wildlife	Scenic	Historic	Recreation	Energy	Other
PLANTING	●	●	●	●	●	●	●	●	●
ERECT	○	○	○	○	○	○	○	○	○
LAND USE AG	○	○	○	○	○	○	○	○	○
LAND USE COMBINATION	○	○	○	○	○	○	○	○	○
TRANSPORTATION	○	○	○	○	○	○	○	○	○
LAND USE FOREST	○	○	○	○	○	○	○	○	○

Page 7 Final Plan

## Project Goal

To achieve a better future for Minnesota's natural resources
